Article Status

Article	Status	Requirement	Remediations
Article 6 – Classification Rules for High-Risk AI Systems	NOT-APPLICABLE	AI systems listed in Annex III are classified as high-risk if they pose significant risk to health, safety, or fundamental rights. Article 6 determines whether conformity assessment obligations (Articles 9–15) apply.	—
Article 9 – Risk Management System	PARTIAL	Establish and maintain a continuous risk management system throughout the AI system lifecycle, including identification, analysis, estimation, evaluation, and treatment of risks.	- Review and correct contradicted claims with accurate source data. - Complete Annex III conformity assessment for high-risk classification.
Article 10 – Data and Data Governance	PARTIAL	Training, validation, and testing data sets shall be relevant, representative, free of errors, and complete. Data governance measures must address bias detection, data quality, and special category data processing in accordance with GDPR.	- Audit training data quality — contradicted outputs indicate potential errors in training data per Art. 10(3). - Review data completeness — unverified high-importance claims suggest gaps in training data coverage.

Article	Status	Requirement	Remediations
Article 11 – Technical Documentation	COMPLIANT	Technical documentation shall be drawn up before the AI system is placed on the market, covering system description, design specifications, and decision-making rationale.	—
Article 12 – Record-Keeping	COMPLIANT	AI systems shall be designed with capabilities enabling automatic recording of events (logs) throughout their lifecycle, ensuring traceability of system functioning.	—
Article 13 – Transparency and Provision of Information	PARTIAL	AI system must be sufficiently transparent to enable users to understand its capabilities, limitations, purpose, and the logic behind significant outputs.	• Add source attribution for unverified claims. • Implement confidence scoring to flag uncertain outputs. • Document AI system capabilities, limitations, and intended purpose.
Article 14 – Human Oversight	COMPLIANT	AI system design must enable natural persons to effectively oversee and intervene during operation to prevent or minimise risks to health, safety, or fundamental rights.	—
Article 15 – Accuracy, Robustness, and Cybersecurity	PARTIAL	High-risk AI systems shall achieve appropriate levels of accuracy and be resilient against errors, faults, and cybersecurity attacks that could cause the system to behave in an unintended way.	• Investigate contradicted claims — accuracy failures may indicate training data or inference issues per Art. 15(1). • Implement accuracy benchmarking against representative test sets per Art. 15(1). • Conduct robustness testing against distributional shift and edge cases per Art. 15(2).
Article 52 – Transparency Obligations for Specific AI System Types	NOT-APPLICABLE	AI systems interacting with humans must disclose they are AI (§1). Systems performing emotion recognition or biometric categorisation must inform the persons concerned (§2). Deep-fake and synthetic media must be labelled as machine-generated (§3).	—

Article	Status	Requirement	Remediations
Article 53 – Obligations for Providers of GPAI Models	PARTIAL	Providers of general-purpose AI models must maintain technical documentation (§1a), publish training data content summaries (§1b), implement copyright compliance (§1c), and publish an acceptable use policy (§1d). Models with systemic risk have additional obligations under Art. 55.	• Confirm the GPAI model provider has published technical documentation per Art. 53(1)(a). • Verify the provider has published a summary of training data content per Art. 53(1)(b). • Confirm the provider has a copyright compliance policy per Art. 53(1)(c). • Confirm the provider has published an acceptable use policy per Art. 53(1)(d). • Include GPAI provider Art. 53 compliance confirmation in your procurement due-diligence checklist.
Article 50 – Transparency Obligations for GPAI Models	NOT-APPLICABLE	AI-generated content must be disclosed to users. Synthetic, opinion-based, or GPAI-produced content requires explicit machine-generated labelling.	—

Annex III Conformity Assessment

APPLICABLE Yes	PASS RATE 50%
-------------------	------------------

#	Article	Requirement	Status	Evidence
annex-iii-0	Article 6	High-risk classification — Annex III domain match assessed; conformity assessment obligation determined	PASS	Article 6 status: not-applicable
annex-iii-1	Article 9	Risk management system — continuous identification, analysis, evaluation, and treatment of risks	PARTIAL	Article 9 status: partial
annex-iii-2	Article 10	Data and data governance — training data quality, completeness, bias examination	PARTIAL	Article 10 status: partial
annex-iii-3	Article 11	Technical documentation — sufficient for conformity assessment and post-market monitoring	PASS	Article 11 status: compliant

#	Article	Requirement	Status	Evidence
annex-iii-4	Article 12	Record-keeping — automatic logging of events during AI system operation	PASS	Article 12 status: compliant
annex-iii-5	Article 13	Transparency — users can interpret and use AI output appropriately	PARTIAL	Article 13 status: partial
annex-iii-6	Article 14	Human oversight — effective oversight by natural persons during operation	PASS	Article 14 status: compliant
annex-iii-7	Article 15	Accuracy, robustness, and cybersecurity — appropriate to intended purpose	PARTIAL	Article 15 status: partial
